

Copying Radar Tapes

There is a dual-tape copier downstairs. We need to make a copy of all of the WSR-88D data and provide a copy to Mike Biggerstaff from Texas A&M University. The procedure is quite simple.

1. Make sure the master tape is write-protected (“red window closed”)
2. Note Tape ID. This will be a number such as “KBYX Seq # 01112).
3. Turn on tape copier
4. Insert master tape in drive labeled “Source.”
5. Label copy tape (for this example, KBYX_01112, Copy 1 or Copy 2) and insert in drive labeled “Copy.”
6. Press black button until it reads

Insert Source: A
 Copy: B

7. The tape copying will commence.
